- ▶ Extremely bright, large 7.6-cm TFT colour display (super clear LCD)

HIGH SPEED
EXILIM

ADDITIONAL HIGHLIGHTS

Slow-motion function

With this function, the movement of the motif can be monitored in replay on the TFT colour display to ensure that you press the release button at precisely the right moment when the perfect photo is in view.

Pre-record mode

With continuous recording of up to 40 photos per second, a maximum of 39 photos can be saved in the camera's buffer memory — even before the shutter release button is pressed. The 40th image then corresponds to the photo that was taken when the shutter release button was pressed.

Flash Continuous Shutter

With the Flash Continuous Shutter on the EX-FH20, it is possible to take up to ten consecutive photos with flash, with a speed of up to five photos per second. So you can guarantee great photos in poor light conditions!

BEST SHOT motif programmes

To ensure that all your photos and movies are a success from the start, the EX-F1 comes with 26 flexible presettings for a wide range of situations.

Three auto-bracketing modes

With the EX-F1, you can take photo sequences with gradual changes in the white balance light setting or the focus.

HDMI interface

Connect your EX-F1 easily to your HD-Ready TV or projector via the HDMI cable (available separately) and watch your films in outstanding quality.

The High Speed EXILIM EX-F1

is available to buy from specialist dealers, shopping centres, electrical goods stores and all good shops.
